

Instructions for use Pump for drilling machine

(20367)

Safety instructions

To avoid injury:

- Only use the pump if it is established over the free movement or reversing.
- Before each use, check that the pump is in perfect condition. If you find damage to the pump, don't use it.
- Check the strength of the couplings on hoses.
- Make sure that the drill with which the pump is connected, any liquid. If this was after all, pull out the power plug.
- This device is not suitable for children or other persons with reduced physical, sensory or mental capabilities that are unattended or support able to use this device without risk. Supervise children to play with the appliance.

Purpose of use

This pump is designed for...

- commercially available hand-held drill with clockwise clamping neck Euro 43 mm and arc chuck with speeds up to 3400 rev. / Min.
- for pumping cold or hot liquids up to 40 ° C, eg. commercial or polluted water of aquariums, etc. ..

This pump is not intended for...

- pumping of flammable, explosive, toxic or corrosive liquids or food.

Installation and connection

- Mount the pump on a firm surface with screws (mounting hardware is not included with the product).
- Drill chuck onto the axis of the pump and tighten the chuck
- Suction hose and pressure hose to the pump.

Use

The open end of the suction hose in the liquid.

This is possible only...

- If the suction hose does not suck air and not longer than 4 m and
- If it is not close during the suction hose.

Allow the pump to power drill - but not unattended so that you can quickly intervene if risk. Always make sure that the drill rotates driving on, the same as when drilling. If the speed drills to use, you can influence the amount of pumped.

Attention!

If the pump does not suck up within 12 seconds, turn it off immediately to prevent seizure. For this reason, leave the pump running when the hose on the outlet side is closed.
