Instructions for use of suction pump **(50015)**

Plastic suction pump for cleaning fouled siphons of sinks and washbasins.

The pressure drain cleaner works this way - by pulling the plunger back and forth across the sealing nozzle pressed to the waste pipe is produced by vacuum and overpressure, which agitates particles clogged in the pipeline.

Flexible rubber sealing ensure tight connection between the pump and a siphon.

The procedure is repeated several times until the waste passable. This method requires no harsh chemicals and it is very environmentally friendly.

Main technical parameters: impurities are released vacuum and pressure pumps

- Diameter of 65 mm rubber
- The volume of 1000 ml piston
- Total length 380 mm
